

FUEL TANKS

GET MORE RANGE WITHOUT COMPROMISING CLEARANCE OR DEPARTURE ANGLES

Whether you're planning a big trip, or simply want to save by refuelling when prices are low, the solution to covering long distances between fill-ups is to fit a high capacity Outback Accessories replacement, auxiliary or LPG conversion tank.

Produced using the latest (CAD/CAM) computer-controlled design and manufacturing equipment, Outback Accessories tanks are designed and built for strength, durability and complete reliability using superior 2mm aluminised steel and MIG welding with quality inert shielding gas and level layer wound wire to ensure good penetration and exclude porous welds.

With over two decades of experience developing tanks for use in tough terrain, Outback Accessories' designs offer maximum ground clearance with no compromise to departure and ramp-over angles, and

feature strategically placed mounting points to relieve the stresses caused by chassis twist when used in extreme conditions.

Supplied with a complete fitting kit and full instructions, Outback Accessories tanks require no exhaust modifications and retain existing *oem* parts where possible.

Manufactured to the highest standards, and cleaned, checked and pressure-tested prior to coating, all tanks are covered by a comprehensive two-year warranty. You can rely on an Outback Accessories tank – that's guaranteed!

- 2mm MIG WELDED ALUMINISED STEEL
- CNC-MACHINED PUMP/SENDER GAUGE FLANGE ACCEPTS OEM EQUIPMENT
